Covering the Research and Development Spectrum of Computing and Applied Sciences

Covers the research and development spectrum of the computing and applied sciences disciplines. It contains collected knowledge on traditional engineering challenges & research, and is a resource for research concerning the business and social implications of new technology.

Content Includes:

- Indexing and abstracts for thousands of academic journals, professional publications, and other reference sources
- Full text is also available for more than 1,000 periodicals

Subjects Include:

- Computer Theory and Systems
- Engineering Disciplines
- New Technology
- Scocial and Professional Context

" EBSCO has thoroughly covered the field and offers a good selection of full text. Results are available for very recent items. A nice extra in EBSCO's product is the ability to perform Cited References Searching. "
